Upload files on server

To upload all the files in the zip file of html nukejmap 4.0, careful to load the folder also jmap_installer and file nukejmap.php

Installing DB tables

Start the installation by starting the file nukejmap.php content in the root of your site and then type a URL <http://www.sito.it/nukejmap.php> or if your site is contained in a subfolder will be an address like <http://www.sito.it/folder/nukejmap.php>.

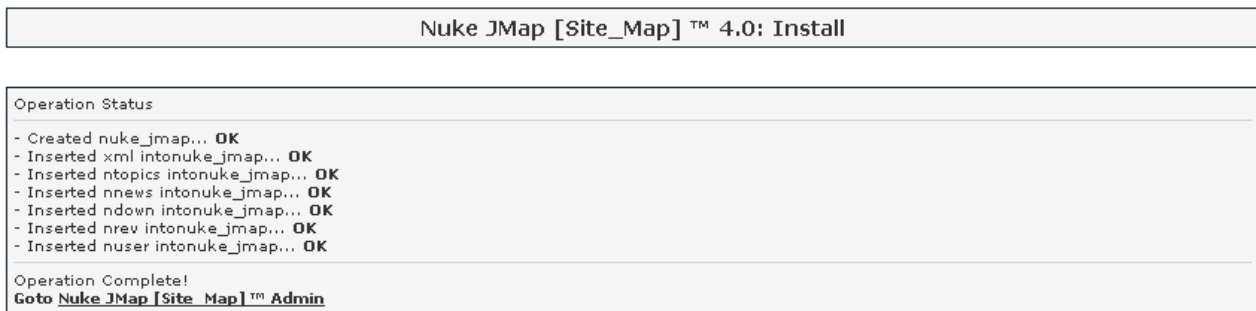

You'll see a screen like this:

Nuke JMap [Site_Map]™ 4.0	
This script will install, remove, or upgrade the tables for the Nuke JMap [Site_Map]™ 4.0	
Backup data tables before going on!	
---- Install Options ----	<input type="button" value="COMMIT"/>
Once you have finished with this script, delete it from your server!	
Copyright © 2006 by www.techg3n.net	

Selection from the drop-down menu under "First Time Install" and click the button "COMMIT"

Nuke JMap [Site_Map]™ 4.0	
This script will install, remove, or upgrade the tables for the Nuke JMap [Site_Map]™ 4.0	
Backup data tables before going on!	
Nuke JMap [Site_Map]™ 4.0 First Time Install	<input type="button" value="COMMIT"/>
Once you have finished with this script, delete it from your server!

Once you are finished you should see a screen of successful installation, similar to this:

As you can see next to each sentence there shall be marked "OK" if it is so you can continue clicking on "Goto Nuke JMap [site_map]™ Admin", otherwise check if you have already installed a table with the same name as that of NukeJMap (nuke_jmap) and if you have trouble open a post on the forum of the creator: www.techg3n.net.

The eventual removal of the module is always performed using the nukejma.php file and folder jmap_installer.

Configuration / Administration Panel

Once we enter the administration panel of NukeJMap we face a mirror like this:

Amministrazione mappa del sito

Creazione XML: ☒ Si ☐ No

N° Downloads:

N° News:

N° Recensioni:

N° Ultimi post forum:

N° Utenti:

@NukeJMap

Briefly list the various items and the functions they perform:

- Creating XML
or Whether to create a file called sitemap.xml in the root of the site that allows for greater indexing of pages and contains the tree of the site
- N ° News
o Number of items to show in the form *

- N ° Last Post Forum
 - o Number of the last post posted in the forum to display in the form *
- N ° Downloads
 - o Number of downloads added last to display in form *
- N ° Reviews
 - o Number of reviews submitted by the last display in form *
- N ° Users
 - o Number of registered users to display in the last form *

* To form means the site_map module to enable modules phpnuke administration panel. In addition to displaying the module links are also indexed in the XML file.

For information or problems do not hesitate to write a post on the forum www.techg3n.net
